A System and Method to give a true indication of Respondent Satisfaction to an electronic Questionnaire Survey

2. Product Positioning

2.1 Statistical Analysis:

1	Mean:		Standard Deviation:		Skew:		802
	$\sum x$	1.1	$\sqrt{\sum (x-x)^n}$	3.3	$\frac{\left(x_{mid} - \overline{x}\right)}{\left(x_{mid} - x_{mid}\right)}$	8.2%	

- With a mean of 1.1, Product Positioning is a discipline suitably covered by the company, and a standard deviation of 3.3 means that this assessment may be taken as a moderate indicator of the inputs to the survey.
- A skew of 8.2% implies that these results are forecasted to automatically turn more positive, as the inputs were positively weighted about the mean.

2.2 Company Implementation:

Communication Factor:	Company Strength:	Customer Importance:
68.8%	29.3%	46.7%

- With a 68.8% communication factor, customers do not know the company's position towards the area of Product Positioning.
- With a company strength factor of 29.3% and a customer importance factor of 46.7% the company has correctly positioned this discipline, but its importance may still not be fully appreciated by the company as required by the customer base.
